

VMware vRealize® Operations Federation Management Pack™ 1.0 Release Notes

VMware vRealize® Operations Federation Management Pack™ 1.0 Release Notes | Build 6828309
Last document update: 10 October 2017

The release notes include the following topics:

- [Introduction](#)
- [What's New](#)
- [Product Interoperability](#)
- [Known Issues](#)

Introduction

With vRealize Operations Federation Management Pack 1.0 you can unify your multi-site vRealize Operations Manager deployment into a single pane of glass. You can instantiate a deployment of vRealize Operations Manager with the capability of receiving key metrics for specified objects from other vRealize Operations Manager deployment in your environment.

What's New

- vRealize Operations Federation Management Pack 1.0 provides a mechanism to determine health and configuration for different core applications.
- vRealize Operations Federation Management Pack 1.0 provides a unified view of events triggered across the virtual environments into a single pane.
- vRealize Operations Federation Management Pack 1.0 provides a summary of performance, capacity and configuration information.
- vRealize Operations Federation Management Pack 1.0 caters to out-of-the-box use cases that are delivered through dashboards.
- vRealize Operations Federation Management Pack 1.0 dashboards cater to senior executives, NOC, and Virtual infrastructure users by providing them an overview of overall capacity, summary of ESXi Host, cluster configurations, health and configuration of SDDC Management Stack.

Product Interoperability

The following section lists the product interoperability of vRealize Operations Federation Management Pack 1.0:

- VMware vRealize Operations Manager 6.6.x

Known Issues

- Adapter instance is unable to create a valid connection to the target system

The adapter instance cannot create a valid connection to the target system when you specify the FQDN of the child vRealize Operations Manager deployment.

Workaround

Enter the host name or IP address of the server instead of FQDN.
